

## 4. Common Fortify Scan Issues

This page has been made public for vendors

### Fortify Scan Issues

This page is a parent for technical notes which describe common Fortify scanning errors. Each technical note describes the error, how to detect the error and how to resolve the issue.

The following scanning errors are described:

- [Fortify Scan Issue: Audit was not performed within Fortify](#)
- [Fortify Scan Issue: Buildable source not delivered](#)
- [Fortify Scan Issue: Cannot determine what source code provided corresponds to source code scanned](#)
- [Fortify Scan Issue: Code broken into a large number of FPR files](#)
- [Fortify Scan Issue: Code not scanned](#)
- [Fortify Scan Issue: Code scanned but not delivered](#)
- [Fortify Scan Issue: Default rulepacks were not used during scan](#)
- [Fortify Scan Issue: Errors during scan](#)
- [Fortify Scan Issue: Hidden and suppressed Issues](#)
- [Fortify Scan Issue: Issues not audited](#)
- [Fortify Scan Issue: Old version of Fortify used during scan](#)
- [Fortify Scan Issue: Old version of rulepacks used during scan](#)
- [Fortify Scan Issue: Quick scan mode used](#)
- [Fortify Scan Issue: Removed Findings](#)
- [Fortify Scan Issue: Scanned source differs from provided source](#)
- [Fortify Scan Issue: Unable to extract source code from FPR files](#)

Search technical notes:

*Example search: "rulepack" (no quotes)*
